

CLAIM OR CLAIMS

I claim

1. A method of allowing basketball shooting contest to take place between two or more contestants at different locations who have access to a high speed network connection. The method utilizes autorebounders, video cameras, scoring sensors, display devices, subsidiary computer controllers, master computer controllers and appropriate communication, video analysis and database software.
2. The method according to claim one that uses communication circuits that are any combination of wired and wireless means.

ABSTRACT OF THE DISCLOSURE

A method utilizing basketball rebounders, network connections, various sensors, video cameras, and output monitors to allow basketball shooters to engage in shooting competitions with one another without being in the same physical location.
